

Joliet Arsenal Worker Given Prize for Idea

For his idea which will represent a savings in maintenance time and cost, Euphremio Longo, an operating engineer at the Elwood unit, Joliet Arsenal, was given a cash award and army suggestion citation, recently.

Longo, of 422 S. Chicago St., suggested installing metal type ventilating screens in the primary air intake assembly of oil fed boilers. The adoption of his suggestion will represent savings in maintenance time and cost by eliminating the accumulation of foreign material.

Longo was first employed at the arsenal in 1940 at the Elwood unit.

The award was presented by James Oliver, foreman of boiler houses, in behalf of Col. Ronald B. Currens, Arsenal commander.
